Exp No: 10 (b) DESIGN AND IMPLEMENT AN INTERNETWORK USING WIRELESS, ROUTER, DHCP SERVER AND INTERNET CLOUD
28/09/26

AIM:

To design and configure an internetwork using wireless router, DHCP server and internet cloud in cisco packet tracer.

PROCEDURE:

1. Create the topology using PC, laptop, wireless router, cable modem, internet cloud & cisco.com
2. connect the devices using appropriate cable.
3. Configure wireless router using SSID HomeNetwork and enable DHCP.
4. configure PCO to obtain its IP address automatically using DHCP.
5. configure the internet cloud and cable modem connections.
6. configure cisco.packet server as DHCP and DNS server.
7. Assign the server IP address 208.67.220.220
8. verify the IP configuration of PCO using ipconfig/all.
10. Test connectivity using ping 208.67.220.220 and ping cisco.com.

```
exit
Router(config)#end
Router#
%SYS-5-CONFIG_I: Configured from console by console
show ip interface brief
Interface              IP-Address      OK? Method Status                Protoco
GigabitEthernet0/0     192.168.10.1    YES manual up                    up
GigabitEthernet0/1     192.168.20.1    YES manual up                    up
GigabitEthernet0/2     unassigned      YES unset  administratively down down
Vlan1                  unassigned      YES unset  administratively down down
Router#

Router con0 is now available
```

RESULT:

Thus, ~~internetwork~~ using a wireless router, DHCP server and internet cloud was sucessfully configured and cisco.com server was verified.
