PING PROGRAM

AIM:

To implement a user_defined ping program to check the connection and response time of a destination host over a network.

CODE:

```
import os
import platform
import subprocess
def ping(host='goggle.com', count=4)
    paran = "-n" if platform.system().
                                lower()
        == "windows" else "-c"
    command = ["ping", param, str(count),
                host]
try:
    output = subprocess.check_output(
        command, universal_newline=True)
    print(output)
    except Exception as e:
        print(f"ping failed:{e}")
if-name__ == "__main__":
    ping("8.8.8.8")
```

OUTPUT:

```
pinging 8.8.8.8 with 32 bytes of data:
Reply from 8.8.8.8 bytes = 32 time = 6ms=119
Reply from 8.8.8.8 bytes = 32 time =5ms TTL=119
Reply from 8.8.8.8 bytes = 32 time = 9ms = TTL=119
```

Reply from 8.8.8.8 bytes = 32 time = 7ms TTL = 119

ping statistics for 8.8.8.8 : sent = 4, Received = 4.

Result:

Thus, it displays the destination hosts IP address and response time.
