Exp No : 14 PACKET SNIFFING USING RAW SOCKETS

08/10/2026

AIM:

To implement packet sniffing using raw sockets.

CODE:

```
from scapy.all import sniff
from scapy.layers.inet import IP, TCP, UDP, ICMP
def packet_call_back(packet):
    if IP in packet[IP]
    protocol = ip_layer.src
    dst_ip = layer.dst
    protol_name = " "
    if protocol_name = " "
        protcl_name == 1:
    elif protocol_name == 6:
        protocol_name = "TCP"
    elif protocol_name == 17:
        protocol_name = "UDP"
else:
    protocol_name = "Unknown protocol"
    printf(f"protocol : {protocol_name}")
    print(f"source IP: {src_ip}")
    print("_" * 50)
sniff(iface='wi-Fi', prn=packet_callback,
      filter='ip' store=0)
```

OUTPUT :

protocol : UDP

source IP : 57.144.53.54

Destination : 172.16.57.165

protocol : UDP

source IP : 57.144.53.54

Destination : 172.16.57.165

protocol : UDP

source ID : 172.16.57.165

Destination IP : 57.144.53.54

RESULT :

Thus the packet sniffing is implemented using scapy & sockets to capture and display IP packet details.
